

WedgeLink Software RS-232 Data Utilities

These RS-232 utilities takes data coming into a PC serial port from a Dillon instrument and enters it directly to the PC software application of your choice. It accomplishes this by "fooling" the software application to believe that the data is actually being typed by the user. Typical software applications include Excel, Lotus 123, SPC programs, etc. Nearly all of these programs offer "parsing", which is the ability to automatically strip undesired characters such as units tags. Compatible with all Dillon Instrumentation.

WedgeLink Software

WedgeLink is available in two different editions, each designed to meet specific sets of user requirements.

WedgeLink Lite is quite simple and does not offer any parsing capabilities. WedgeLink Standard is a well rounded software program that offers extensive parsing.

Part Number	Description	List Price
52697-0066	WedgeLink Lite - Registration Code	\$120
52697-0025	WedgeLink Standard - Registered Code	\$255

WedgeLink software is a product of MicroRidge. Dillon is a distributor for this software. MicroRidge furnishes unlimited free sales assistance and customer support for the distributor and end user at:
